

Element aria-* Attributes Are Allowed For This Role

Overview

Invalid role-attribute combinations can disable the accessibility of your page.

See [Introduction to ARIA](#) for more information.

Recommendations

Below the audit, Lighthouse displays something like `1 element fails this test`. The number varies depending on how many elements are failing. Click this label to expand the list. You can find each element in your DOM by running the `$()`, `$$()`, and `$x()` functions from the Chrome DevTools Console.

To find each element's invalid combination(s):

1. Note the `role` and `aria-*` attributes of the element.
2. Go to [Definition of Roles](#).
3. Go to the page for this element's `role`.
4. Check the `aria-*` attributes of the element against the **Required States and Properties** or **Supported States and Properties** lists. Any attribute that is not in one of these two lists is invalid.

To fix the invalid combo, you can either remove the invalid attributes from the element, or change the role of the element to one that supports the attributes.

More information

This audit is powered by the aXe Accessibility Engine. See [Elements must only use allowed ARIA attributes](#) for more information.

Feedback

Was this page helpful?

YES

NO

Great! Thank you for the feedback.

Sorry to hear that. Please [open an issue](#) and tell us how we can improve.
