## Network colour groups

Dev Tips Daily

[umaar.com/dev-tips](https://umaar.com/dev-tips)

@umaar

Get a simple overview of resource types in the Network panel with the *Color-code resource types* feature. To enable (if not already)

1. Go to Settings (the cog wheel)
2. In the general section, find the network heading.
3. Check *Color-code resource types*.

Each of Scripts, Stylesheets, documents, fonts and more will be coloured based on its type so you can easily understand what you're looking at without having to read the filename.
