

Uses HTTP/2 For Its Own Resources

Overview

HTTP/2 can serve your page's resources faster, and with less data moving over the wire.

See [HTTP/2 Frequently Asked Question](#) for a list of benefits that HTTP/2 provides over HTTP/1.1.

See [Introduction to HTTP/2](#) for an in-depth technical overview.

Recommendations

Under **URLs**, Lighthouse lists every resource that was not served over HTTP/2. To pass this audit, serve each of those resources over HTTP/2.

To learn how to enable HTTP/2 on your servers, see [Setting Up HTTP/2](#).

More information

Lighthouse gathers all of the resources that are from the same host as the page, and then checks the HTTP protocol version of each resource.

Lighthouse excludes resources from other hosts from this audit, because it assumes that you have no control over how these resources are served.

Feedback

Was this page helpful?

YES

NO

Great! Thank you for the feedback.

Sorry to hear that. Please [open an issue](#) and tell us how we can improve.
