Search DOM tree by CSS selector

By <u>Umar Hansa</u> Umar is a front-end web developer

When browsing the DOM with the Elements panel, try searching for nodes via CMD/Ctrl+F by their CSS selectors.

```
><script type="text/javascript">...</script>
▼ <div id="mainbar">
  <div class="subheader">...</div>
  ▼ <div id="glist-wrapper">
    ▼ <div id="question-mini-list">
      ▶ <div class="question-summary narrow"
      ▶ <div class="question-summary narrow" id=
      ▶ <div class="question-summary narrow" id=
      ► <div class="question-summary narrow" id=</p>
      ▶ <div class="question-summary narrow" id=
      ► <div class="question-summary narrow" id=</p>
      ▶ <div class="question-summary narrow" id=
      ► <div class="question-summary narrow" id=</p>
      ► <div class="question-summary narrow" id=</p>
      ▶ <div class="question-summary narrow" id=</p>
    #qlist-wrapper div#question-mini-list
                                            Cancel
Find
```
