## Inspect Resources

# **By** <u>Kayce Basques</u> Technical Writer for Chrome DevTools

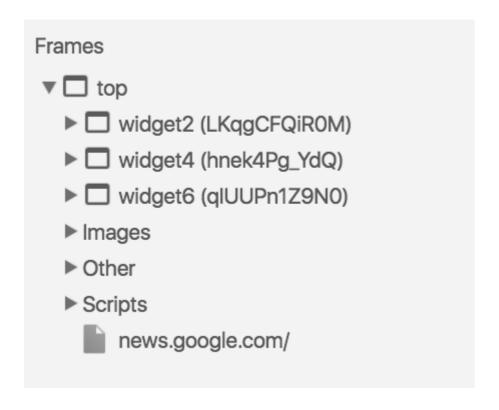

Organize resources by frame, domain, type, or other criteria.

#### TL;DR

- Use the **Frames** pane of the **Application** panel to organize resources by frame.
- You can also view resources by frame from the Sources panel by disabling the group by folder option.
- To view resources by domain and folder, use the **Sources** panel.
- Filter resources by name or other criteria in the **Network** panel.

#### Organize resources by frame

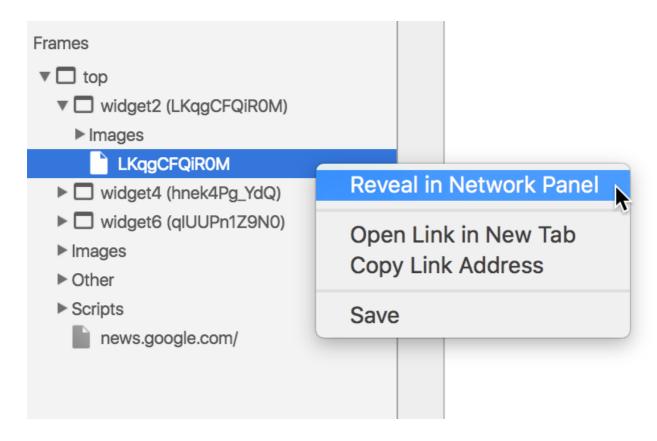

Use the **Frames** pane on the **Application** panel for a frame-organized representation of your page's resources.

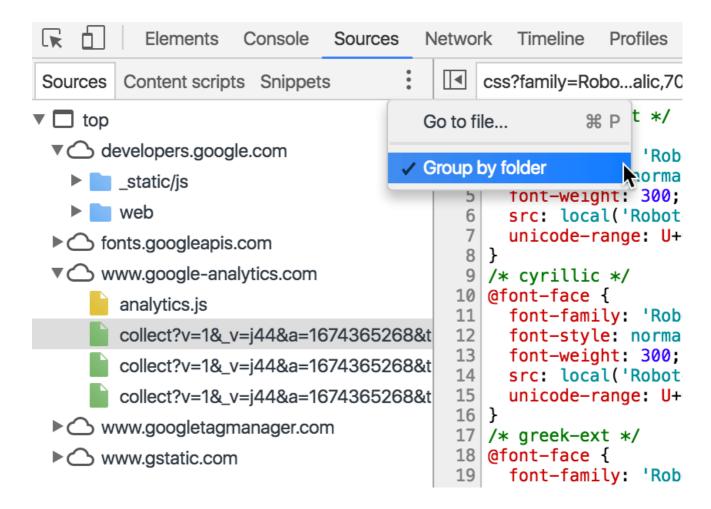

- The top-level (top in the screenshot above) is the main document.
- Below that (e.g. widget2 in the screenshot above) are subframes of the main document. Expand one of these subframes to view the resources originating from that frame.
- Below the subframes are the images, scripts, and other resources of the main document.
- Last is the main document itself.

Click on a resource to view a preview of it.

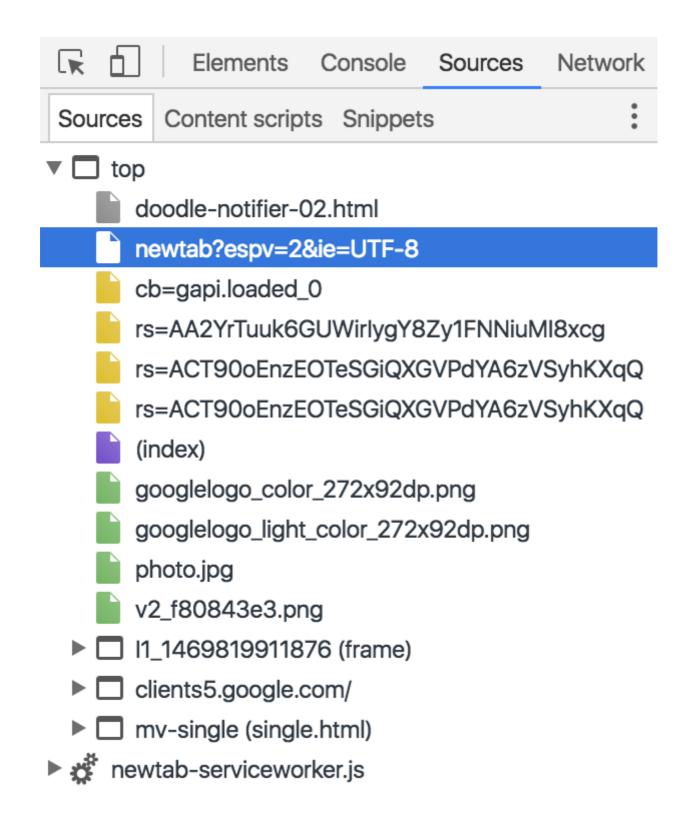

Right-click on a resource to view it in the **Network** panel, open it in a new tab, copy its URL, or save it.

You can also view resources by frame in the **Sources** panel, by clicking on the overflow menu in the navigator and disabling the **Group by folder** option to stop grouping resources by folder.

The resources will be listed by frame only.

### Organize resources by domain and folder

To view resources organized by domain and directory, use the **Sources** panel.
