# Cycle through editing locations

By Umar Hansa

Umar is a front-end web developer

```
  ▶  script.js  ✕                                        ◀

24
25
26  var search = document.getElementById('livesear
27      searchresults = document.querySelectorAll(
28      searchurl = document.getElementById('searcl
29      currentActiveHash,
30      lastActiveHash;
31
32  [].map.call(searchresults, function(result) {
33    var tags = result.querySelector('.tags'),
34        tagslist = text(tags).split(' '),
35        ielist = tagslist.filter(function(tag) {
36          return tag.match(/gtie.*/);
37        });
38
39    tagslist.push('showall');
40
41
  {}  Line 32, Column 1
```

Your cursor position history is preserved in the Sources Panel allowing you to cycle through previous editing locations with Alt- (backwards) or Alt+ (forwards).
