# Quickly edit/view resources from the Elements panel

By Umar Hansa

Umar is a front-end web developer

If you see resources in the Elements Panel DOM tree, e.g.

```
<script src="app.js"></script>
<link rel="stylesheet" href="styles.css">
```

You can right click on them and select *Open*. The file opens in the Sources Panel where you can view the full source, or start editing it!
